AI Dynamic Face Recognition Attendance With Door Access

TT-62AI

A biometric device equipped with AI-powered dynamic facial recognition technology, enabling rapid identification and effective face detection even in low-light environments. It can accurately scan faces with masks on and offers a capacity of up to 5,000 facial records. With a recognition speed of less than one second, its robust NPU processor ensures quick and efficient operation, making it an ideal choice for businesses seeking a reliable and advanced biometric solution.

Flexible Face Recognition Distance
0.5~2.5 Meters

What is NPU

NPU stands for Neural Processing Unit, which is a specialized microprocessor designed for performing AI and deep learning tasks. It is typically integrated into devices such as smartphones, cameras, and other electronic devices that require high computing power to perform complex AI algorithms. An NPU is optimized for processing large amounts of data simultaneously, making it an efficient and effective solution for AI-related tasks.

SPECIFICATIONS

Door Access

500,000 Data

**Comm
USB,
Wifi,TCP/Ip**

**Adaptor
DC12V**

**Build-in
Bell**

5,000

Build-in

**Face,
Card,
Password**

Addon

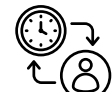

**Working
Humidity
28%~80%**

5,000

Software

**Multiple
Shift**

**5"
Colour
Screen**

**Working
Temperature
0°C~25°C**
